„Utility Planning: Storage Reservoirs” – 3-Gorges Dam, Yangtze, China

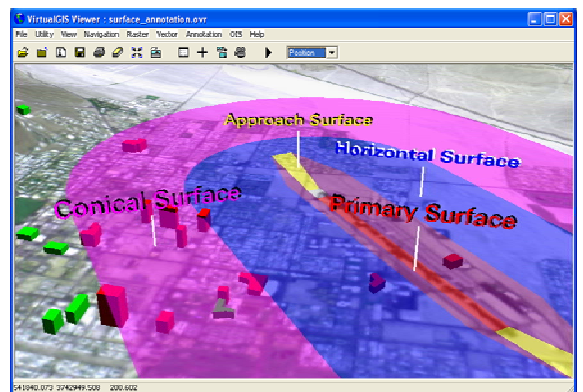

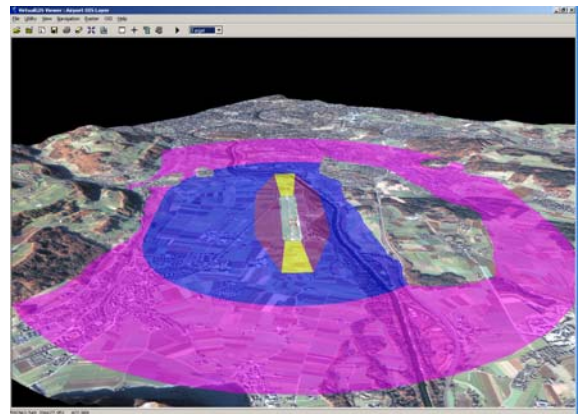

IKONOS and QuickBird 1-meter pan-sharpened multi-spectral natural color images; collected in July and November, 2003)

For the construction of storage reservoirs and dams, stereo satellite data can be used for digital elevation model extraction and as basis for first approach planning of construction and utilities in scales up to 1:5,000.

„Airport Obstruction Mapping and Utility Planning” – Airports of Berne and Zurich

High resolution stereo satellite data are used for the generation of digital airport obstruction mapping in the context of emergency concepts. Furthermore, these data are necessary for utility planning and rapid mapping showing the actual situation of construction progress as base information for airport management.
